

Wrong image data when switching from live to Snap

mvAcquireControl, mvGAMMA-G, mvTITAN-C16, mvTITAN-C8, mvTITAN-CL, mvTITAN-DIG, mvTITAN-G1, mvTITAN-RGB/G4

This was a timing problem within the update thread of the mvAcquireControl, which has been fixed since version 3.105. In addition to that mvTITAN users may need an actual driver, as old driver revision showed a similar effect, as they transferred the first image in a false color mode. Since revision 1.5.26.24 this problem has been fixed.
