

LabVIEW returns error "Unable to load GRABBER.DLL. Check path"

LabVIEW, mvAcquireControl

All VIs from the MATRIX VISION mvLabView-SDK are based on the mvAcquireControl. The Grabber.dll as well as some other DLL-files which are part of this program are used by the VIs. Therefore it is necessary to have this program installed on the target system as well. As the mvAcquireControl is an independent software package it is not installed automatically in connection with the mvLabVIEW-SDK, but has to be installed separately. The mvAcquireControl can be downloaded free of charge from the MATRIX VISION homepage (www.matrix-vision.de) under "support->MATRIX VISION Hardware driver & software".
