

mvBlueGEMINI - Tool box technology camera

In parallel to the intuitive, browser-based software mvIMPACT Configuration Studio (mvIMPACT-CS) we started developing the **Smart Camera mvBlueGEMINI** in 2013. On the one hand, the aim was to create a future-oriented platform for customized developments. On the other hand, we wanted to offer a complete image processing solution including camera and software which enables companies without any image processing capacities to implement quality checks on their own. This concept duo of hardware and software was a remarkable innovation, for which we received the Dr. Rudolf Eberle Innovation Award in 2017 from the State of Baden-Württemberg.

After standardizing our development under the name BVS Cockpit on the software side and distributing through Balluff GmbH, we are now also merging the smart camera products, thus avoiding redundancies. The mvBlueGEMINI smart camera is therefore being discontinued on the MATRIX VISION side and in future can be purchased with an optimized housing through [Balluff GmbH as BVS SL](#).

You may contact us at any time if you are looking for a customized version or a special development.
