

Telecamere

Since 1999 we have been developing cameras. The first cameras was the mvCAM, a smart camera which was available with Windows and Linux operating system. Since then we have managed to expand our portfolio.

In the meantime we offer three camera families divided by interface or type:

1. **mvBlueFOX** - the industrial camera series for **USB 2.0** and **USB 3.0 (USB3 Vision)**
2. **mvBlueCOUGAR** - the industrial camera series for **Gigabit Ethernet (GigE Vision)**
