

Vision Tools V60

The image processing software V60 for industrial image analysis:

- Fast realization of projects without programming language
- Wide application possibilities: standard modules from small parts measurement to complete engine check and robotic
- Easy interactive assembly of basic modules ("objects")
- Clear and modular specification of the overall project
- Extensive object library
- High execution speed
- Automatic post mortem analysis

- VisionTools website: <http://www.vision-tools.com>

Supported MATRIX VISION hardware
